

Updates on Server Base System Architecture and Boot Requirements

Dong Wei

ENGINEERS AND DEVICES WORKING TOGETHER

Agenda

- SBSA/SBBR
- SBBA/SBBR Tests
- Ecosystem Questions

SBSA/SBBR

Platform Architecture

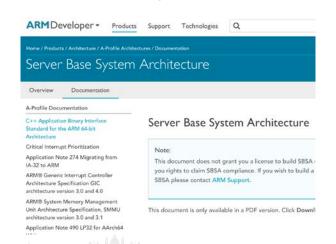

- Base System Architecture (BSA)
 - Defines hardware requirements
- Base Boot Requirements (BBR)
 - o Defines firmware requirements
- •These specifications require a minimum set of hardware and firmware implementations that will ensure OS and firmware will interoperate

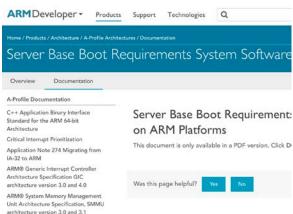

SBSA/SBBR

- •SBSA/SBBR are the BSA/BBR for the enterprise systems
 - Developed using feedback from vendors across the industry (Silicon vendors, OSVs, Hypervisor vendors, BIOS vendors, OEMs and ODMs)
 - oSBBR defines the required, recommended and optional UEFI, ACPI and SMBIOS interfaces
- SBSA are SBBR are now available at https://developer.arm.com/
 - oCurrent versions are SBSA v3.0 and SBBR v1.0
 - No click through license required

SBSA/SBBR Compliance Tests

SBSA/SBBR Compliance Tests

- SBSA test suite covers
 - ○SBSA PE properties
 - SBSA defined system components
 - SBSA rules for PCle integration
 - ■Based on the PCIe specification
 - ■Based on standard OS drivers with no quirks enabled
- SBBR test suite covers
 - UEFI testing based on the UEFI SCT
 - ACPI testing based on FWTS
 - SMBIOS testing
- Provided as open source
 - Apache v2 License
- Built on top of a Platform Adaptation Layer
 - ARM will support one based on UEFI and ARM Trusted Firmware
 - oA silicon vendor can also port to a bare metal environment

SBBR Tests

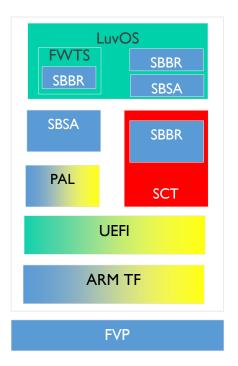

- •From 3 sources (all open source)
 - ○UEFI SCT* (ARM will upstream into SCT)
 - ○FWTS (ARM + Linaro will upstream)
 - Standalone (ARM provides through github and packages into LuvOS image)
- Note: UEFI SCT is currently for UEFI member only. Would like to see it open source

Unified Release

- •A unified software release, to tie all of these deliverables together with the enterprise FVP model
- Planned for future

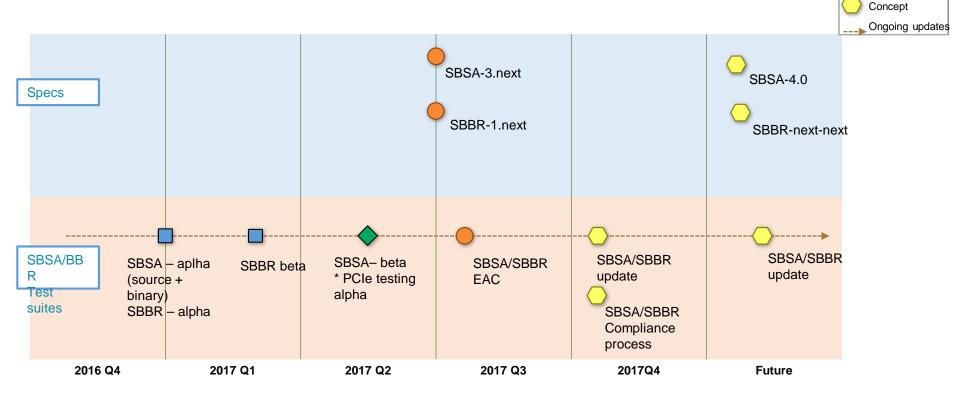

SBSA/SBBR Tests Release

- Overarching github including SBBR
 - ohttps://github.com/ARM-software/arm-enterprise-acs
- SBSA github
 - ohttps://github.com/ARM-software/sbsa-acs

SBSA/SBBR Roadmap

Released

Development Adv. Planning

Questions to the ARM Community

SBSA/SBBR Certificate

- •To improve the out-of-box experience for OS vendors and system users, ARM received feedback that a badge program certifying the SBSA/SBBR Compliance can be useful
- •Feedback?

UEFI Driver Binary Format

- •EBC is a cross-architecture solution
 - One driver image for all ISAs
 - Open-source EBC Interpreter for ARM upstreamed to tianocore
- However,
 - oBenefit cannot be realized if x86 uses its native format, unless more ISAs become relevant
 - No supported EBC Compiler
 - No Secure Boot Signing for EBC Drivers
- •Can the industry come together to solve these problems?
 - olf not, propose that ARM AArch64 native binary format be used for UEFI Drivers on ARM systems
 - oFeedback?

Summary

Conclusion

- •SBSA/SBBR Tests can be used for compliance tests
- Drive closure on a remaining questions
- Contact info: dong.wei@arm.com
